

Year 1 – Autumn 1 Maths

Here are some suggestions of activities to do at home with your child to support their mathematical understanding.

Counting:

- Count to 10, 20, 50 or even 100 accurately!
- Extra challenge, can you count backwards?
- If someone else makes a mistake when counting, can you spot it?

This term we are focusing on count up to 100 and going even higher! I wonder how high you can count...

Every day Maths:

- Baking or cooking activities – how many scoops are needed? Which is heavier? How many cakes can we make? Recognising numbers on the scales.
- Collecting cutlery for the table – if everyone has a plate, how many do you need? How many more spoons do you need?
- Completing puzzles – trial and error approach, changing the direction of puzzle pieces.
- Counting stairs, cars or pairs of socks
- Number or shape hunt – how many numbers can you spot around the house? Which room has the most circles in it?
- Comparing weight/height/length of different objects

Maths

These activities are a suggestion of what you could do, they are not limited and please do feel free to add your own learning!

Please return your book to class **Monday 19th October** so that we can record your progress so far and stick in homework tasks for Autumn 2.
